Thanks Roger. I did speak with Jacquie, and she suggested a team call, which I just sent a Scheduler request for.

Typically, it takes about 2 to 4 weeks for the validation of preliminary results. This would of course depend on the lab's backlog of samples, etc. . . Were you ever able to speak with Jacquie about GenX sampling results and next steps? Thanks.

Roger

Subject: FW: Chemours Washington Works Facility

Do we have any idea when we will be able to post the new data on the EPA website?
Thanks,

Andy

Hi Rob, I am writing to let you know that I have received your email and am looking into the various questions you have asked. I will get back to you shortly.

Best,

Andy

Subject: RE: Chemours Washington Works Facility

Mr. Duchovnay:

Please confirm whether EPA meet with Chemours since your email below and received any GenX, C3 Dimer Acid, and/or PFOA sampling results/data, including any such data showing the detection of any GenX, C3 Dimer Acid, PFOA, and/or related materials in the Ohio River and/or in any outfalls or production wells at the Washington Works plant site. If so, we request copies of all such data (and any other information provided by Chemours to EPA at any such meeting) and clarification as to why such data/results have not been posted on EPA's new webpage (referenced in your email below). Thanks.

Rob

Good afternoon Rob, It was a pleasure speaking with you. As I said, I will be your EPA, Region 3 contact person going forward.

Below please find the link to the EPA website, which now contains the EPA letter to Chemours asking that they sample for GenX, as well as the Chemours reply letter, in which they agree to conduct the requested sampling.
